Summary

Aspiring Software and Machine Learning Engineer with hands-on experience building 7+ projects, including 3 Machine Learning and 4 Web Development projects. Skilled in Python, JavaScript, SQL, Data Analysis, Machine Learning, and MERN Stack, with experience developing predictive systems, intelligent applications, and scalable software solutions.

Education

B.Tech. Computer Science and Engineering

Sreyas Institute of Engineering and Technology, Hyderabad

2023 -2027

CGPA: 9.45

XII CBSE

DAV Public School, Hyderabad

2021 -2023

Percentage: 81%

Skills

Programming Languages: Python, JavaScript, C

MLOps: MLflow, DagsHub, GitHub Actions, DVC, Apache Airflow, ETL Pipelines, Model Training

Web Development: HTML, CSS

Libraries & Frameworks: Numpy, Pandas, scikit-learn, Node.js, Express.js

Projects

unClutter - Smart File Organizer | *Python, DBSCAN, Tkinter*

April 2026 – June 2026

- Developed an intelligent file organization tool to **extract text and categorize** more than 50 files together using clustering algorithms.
- **Algorithms / Techniques used:** DBSCAN Clustering Algorithm, Sentence Transformation for Vectorization
- Designed an intuitive desktop interface with **CustomTkinter** to streamline clutter-free file handling and improve accessibility.
- Created and launched an MVP landing page to validate demand and collect early user interest through a waitlist system.

College Companion Portal | *Full stack development*

Jan 2026 – March 2026

- Developing an integrated college platform featuring **department-based communities, resource sharing, announcements, and academic collaboration.**
- Designed a **smart study planner** with task scheduling, goal tracking, and deadline management for personalized student productivity.
- Architected **6+ planned modules**, including authentication, community interaction, study planning, and event integration.
- Focused on scalable system design and modern web technologies to support seamless student engagement.

Cardiac Disease Prediction System | *Python, Machine Learning, MySQL*

May 2025 – August 2025

- Built a machine learning-based healthcare application to predict cardiac disease risk using **Logistic Regression** on patient health parameters.
- Integrated **10+ medical input parameters**, real-time prediction, result analysis, and personalized health suggestions.
- Developed a desktop GUI with **authentication, prediction history tracking, and MySQL database integration.**
- Implemented data preprocessing, model training, and input validation to improve prediction reliability and usability.

Awards & Certifications

- **Machine Learning A-Z – Udemy (2026):** Completed a **49-hour** certification covering Machine Learning, Deep Learning, AI concepts, AWS, and practical model implementation using Python and R.
